

Long COVID

Perth Neurology Clinic

Many people suffering from COVID-19 have developed long-standing neurological symptoms. Studies of other viral illnesses indicate that long-term neurological problems can develop. This community-based clinic is initiated in order to assess, investigate and follow-up patients who have had COVID-19 and might develop long COVID.

Study team

Principal Investigator:
Professor Peter K Panegyres

Medical Officer:
Dr Anastasia Isakova

Administrative support:
Cheryl MacFarlane
Tammy Mai

Contemplators:
Helen McCabe
Olga Aquilina

Aim

To identify neurological symptoms and to study their natural history.

The Study

Patients will have neurological and other assessments including MRI scanning, cognitive assessments and other investigations. The patient will be followed long-term.

Mechanism: GP or other specialist referral

Clinic

The clinic will be based at:

Neurodegenerative Disorders Research Pty Ltd
